Re: Grinder for the Obed Pump Station

Dear Tim,

You, Darian, and I have been discussing a way to protect the 300-horsepower motors and pumps in the Obed Pump Station from rags and flushed wipes. It has been a continuous maintenance issue and we have discussed methods to keep additional maintenance at a minimum and minimize odor problems. During our last meeting we discussed several options which included installing an additional chamber between the influent manhole and wet well, that would house a grinder with a screened bypass.

We have estimated a construction cost of approximately \$340,000 to complete this work.

GRW proposes to provide plans and specifications to be submitted for review to the City and TDEC and be used for bidding and construction of these facilities. GRW proposes to perform this work for a lump sum amount of \$32,000.00.

If you would like to discuss this further need additional information, please let me know.

Sincerely,

Jim Hilborn

Accepted,

City of Crossville, Tennessee
